Deacero products and LEED qualifications

As one of the world's largest steel wire producers, **Deacero** is a 100% vertically integrated company, controlling the end-to-end manufacturing process. This process includes purchasing scrap steel, melting and pouring, drawing rod and wire and, manufacturing finished products.

All of **Deacero's** steel mills and plants are eco-friendly and incorporate the latest technology in product manufacturing and recycling. For example, no exhaust is vented into the atmosphere and heat from the current melting of steel is ducted and used to preheat the next batch. This not only prevents pollution but is also extremely energy efficient. And, over 99% of the water used during the manufacturing process is recycled.

Most important, all of the steel used is 100% recycled and 100% recyclable, meaning that **Deacero** products easily qualify for LEED points at any construction site or project.

Deacero products qualify for the following LEED points:

Materials & Resources Section:

MR Credit 4.1 Recycled content, 10% (post-consumer + ½ pre-consumer) 1 point
Building products that incorporate recycled content materials. At least 10% of the material must be recycled. Steel products qualify for this LEED credit.

MR Credit 4.2 Recycled content, 20% (post-consumer + ½ pre-consumer) 1 point
Building products that incorporate recycled content materials. At least 20% of the material must be recycled. Steel products qualify for this LEED credit.

If required, Deacero can provide you with the MR 4.1 & 4.2 credit application forms to get these points for your project when presenting it to LEED certification.
